Open Systems Technologies We Love This Stuff!

VDI END USER & BUSINESS CENTRIC APPROACH

Can you answer "yes" to any of the following?

- Does your organization have a need to improve workflow efficiencies and provide flexible, secure access?
- Have you started a VDI or SSO initiative and run into problems?
- Are you struggling to justify VDI?
- Do you need to improve/maintain desktop management with less and less resources?

IF SO, OST CAN HELP WITH OUR PRIVATE CLOUD FOR DESKTOPS

OST's Private Cloud for Desktops is a comprehensive end-user and business-centric solution that:

- Focuses first on your business needs and end-user requirements
- Provides vendor independent recommendations so you end up with an optimal solution, versus one based on a vendor's agenda
- Leverage our 'avoid potholes' and 'preempt roadblocks' knowledge base
- An architecture that incorporates infrastructure components, end-point devices, middleware, enabling technologies, best practices and service considerations

...and a planned approach for how you can reach your end-state objectives in a controlled timeframe.

If you've wondered about it, we've probably done it.

"Our roaming desktop environment is a huge time saver..."

It provides better quality of life for our clinicians and more timely efficient care for our patients."

Dr. Brad Clegg, CMIO, Metro Health
