Edition 3

HOW CAN HEALTHCARE PROVIDERS GUARD AGAINST THE BAD GUYS? GET SMART!

One of the most effective ways to protect yourself from growing security threats is to train your staff. Educate them about the best ways to defend themselves online. Knowledge can be a powerful tool.

Many industries are required to provide annual Security Awareness Training to their staff. Why? Because an educated staff can be the best defense against the on-line and computer threats that are circulating every day.

Sure, they've heard the talk about file attachments and "bad" websites, but are you confident that they're really involved in keeping your business secure?

OST has a different approach. Rather than just holding a training session so you can check that box, we present a lively and engaging session that involves your staff. **Scott Montgomery, our top trainer and leader of our Security Practices division, will share real-life stories of his experiences in working with companies across numerous industries. Scott has personally performed over 500 security assessments for several hundred organizations.** By telling the stories of the how good people were tricked by bad folks, he'll arm your staff with principles that they can use to practice safe computing habits, and they'll be better prepared for whatever new idea those IT villains dream up.

Arm your staff with the information they need to keep themselves secure in the digital age. Help them practice safe computing habits and keep your business information safe and secure. Shouldn't you give your people the best tools available?

Sessions range from 1 to 3 hours, depending on your specific need. Call for pricing and scheduling information. You'll be glad you called.

MONEY BACK GUARANTEE

If this isn't the BEST training experience you've ever had, we'll refund your money back 100%.

DON'T JUST TAKE OUR WORD...

Our employees found the content and topics discussed of great interest and were all in agreement that the one hour session was too short. For future engagements, a 90-minute session will be scheduled and I have had numerous requests for the information Scott provided during his Security Awareness Training. The focus on home user computer habits and security awareness has generated an overwhelming acceptance of IT Security within our group.

Patrick McKay
Director of Information Systems

ABOUT OST

OST (Open Systems Technologies) is an employee-owned, \$55 million company specializing in Healthcare IT Security. Since 2003, the company has logged close to 40% compounded growth in revenue and in its number of employees.
